

When certain thresholds criteria reached, the alert generated. It will send the alert to doctors and the status is changing to sent. Once doctor clicked or open patient details, the status of the alert is going to be acknowledged. If a same alert generate while it already in acknowledged status, the alert will not sent again and stay in acknowledged status. Doctor can then change the alert to resolved manually. The alert will also going to be resolved if the patient status stabilized, either the alert in sent or acknowledged status.
